# Atherv Vidhate

athervvidhate@gmail.com | atherv.com | in/athervvidhate | github.com/athervvidhate

## Education

**University of California, San Diego** — San Diego, CA

B.S. Data Science, Minor in Business Analytics — Expected March 2027

- GPA: 3.91/4.00.
- Economics Lab Research Assistant: built a Python collector for 100,000+ newspaper records with retry and checkpoint support, delivering 300+ grouped publications for the lab lead.
- Tau Kappa Epsilon Historian: built an alumni portal for 1,000+ members to support donations, networking, and chapter history; established code review and conventional commit practices.

## Experience

**CCC Intelligent Solutions** — October 2026 - Present

Applied AI Engineering Intern

**Keysight Technologies** — June 2026 - October 2026

Machine Learning Engineer Intern

- Built a Python and Snowflake SQL anomaly pipeline across 38 forecast models, cutting monthly review volume 88%. Benchmarked 6 detection methods to select a production configuration with 0.82 alert precision.
- Backtested forecast intervals over 1,847 rolling-origin cases in statsmodels; selected an STL with CUSUM replacement with 95.7% coverage, up from 64.9% for existing 95% intervals.

**Intellinum** — Jan 2026 - June 2026

AI Research & Development Intern

- Built a 6-agent workflow with Redis Streams and the Claude API to generate enterprise pages and connect Oracle Fusion SCM through 16+ REST API endpoints.
- Built a static validator for generated page JSON that classifies issues into 3 severity levels and routes them to engineering, QA, or integration teams.

**Nexa Tax** — Aug 2025 - Jan 2026

Full-Stack Developer Intern

- Built a production RAG pipeline over 100+ financial PDFs, extracting 23 structured data categories at 95% accuracy.
- Cut document processing time 60% using YOLO and a multimodal LLM for receipt and income documents in a system serving 1,000+ concurrent users.

**smartQED** — Apr 2025 - Aug 2025

Software Engineer Intern

- Built vector-database retrieval and fine-tuned a diagnostic LLM on 200+ technical reports, reducing root cause resolution time 40% across support cases.
- Connected an AI analytics agent to a remote SQLite database through MCP and demonstrated the analysis workflow to senior leadership.

## Projects

**Fitness Program Recommendation System** | https://workout.atherv.com

- Built a recommendation engine over 600,000+ rows using K-Means and cosine similarity; fine-tuned 2 BERT models for sentence embeddings. Deployed with Docker on GCP and automated CI/CD with GitHub Actions.

**LA Hacks** | https://devpost.com/software/cadence-ch4rmf

- Built an Expo care companion for heart failure patients, with Apple Vision OCR and Gemma 4 medication extraction, a Node.js/MongoDB backend, ElevenLabs voice-cloned check-ins, and a React dashboard for caregiver alerts.

**Concert Scout AI** | https://github.com/athervvidhate/ConcertScoutAI

- Built a FastAPI and Next.js concert recommendation app serving 300+ users, with a multi-agent Gemini workflow and Redis session management.

## Technical skills

**Languages**: Python, SQL, R, Java, TypeScript, JavaScript
**Frameworks & Libraries**: PyTorch, TensorFlow, scikit-learn, statsmodels, pandas, NumPy, Spark, FastAPI, LangChain
**Tools & Platforms**: AWS, Docker, Databricks, Snowflake, GCP, PostgreSQL, MongoDB, Redis, Tableau, Git
