Education

University of California, San Diego

San Diego, CA

Bachelor of Science in Data Science, Minor in Business Analytics

Expected Graduation: 2027

- Tau Kappa Epsilon Historian: Built alumni engagement portal to support donations, networking, and access to chapter history for 1000+ members; implemented SDLC practices, conventional commits, and code review standards.
- Economics Lab Research Assistant: engineered a data pipeline using the Library of Congress API to extract 100,000+ entries on 19th-century presidential campaign newspaper coverage and group 300+ related publications.

Experience

AI Research & Development Intern

Jan 2026 – Present

Intellinum

- Architected a 6-agent autonomous AI pipeline using Redis Streams and the Claude API to automate enterprise page generation and Oracle Fusion SCM integration, eliminating manual development cycles across 16+ REST API endpoints.
- Engineered modular LLM agent prompt systems with structured tool-file decomposition, shared identity contracts, and a 3-step grounding protocol, enabling agents to produce zero-defect production JSON artifacts with no human intervention.
- Developed a rules-based validation engine that statically analyzes FlexiPro Studio page JSON, detecting and triaging issues across 3 severity levels with structured output routed to the appropriate engineering, QA, or integration teams.

Full-Stack Developer Intern

Aug 2025 – Jan 2026

Nexa Tax

- Delivered 95% structured data extraction accuracy in production-grade AI tax processing system with 100+ PDF documents processed through RAG pipeline, achieving structured data extraction from financial documents with 23 categories.
- Optimized computer vision pipeline achieving 60% reduction in processing time through YOLO object detection and multimodal LLM architecture for receipt/income document processing, with 100% uptime for 1000+ concurrent users.
- Engineered scalable Flask REST API with LangChain and LangGraph state management, implementing 8+ endpoints for chatbot interaction and conversation history tracking with Postgres persistence and user session management.

Software Engineer Intern

Apr 2025 – Aug 2025

smartQED

- Fine-tuned a diagnostic LLM on 200+ complex technical reports, significantly improving the model's reasoning capability and reducing root cause resolution time by 40% across product support cases.
- Integrated an AI analytics agent with remote SQLite database via Model Context Protocol, enabling real-time analysis pipelines and showcasing next-gen automation frameworks to senior leadership.
- Constructed a high-fidelity dataset for LLM training by sourcing, cleaning, and structuring over 2GB of raw aviation incident data to support high-accuracy safety prediction models.

Projects

Fitness Program Recommendation System | workout.atherv.com

- Built a recommendation engine over 600,000+ rows with K-Means clustering, cosine similarity, and PCA for visualization.
- Fine-tuned 2 BERT models and engineered a custom reusable embedding module that outputs sentence-level vectors.
- Shipped with Docker and Google Cloud Platform for deployment and automated CI/CD pipeline with Github Actions.

Concert Scout AI | concertscout.app

- Built a full-stack AI-powered concert recommendation system using FastAPI and Next.js for over 300 active users.
- Implemented a multi-agent AI pipeline with Google Gemini to deliver personalized concert results.
- Deployed a scalable backend infrastructure with Redis session management and analytics tracking.

Power Outage Analysis | atherv.com/poweroutageanalysis

- Used techniques like one-hot encoding, hyperparameter tuning, and cross-validation to build optimized Random Forest models predicting outage severity, achieving a 15% accuracy improvement.
- Cleaned 1,500+ row dataset, ensuring structured formats and engineering 4 new features for enhanced analysis.

Technical Skills

Programming Languages: Python, SQL, R, Java, TypeScript, JavaScript, HTML/CSS

Frameworks & Libraries: scikit-learn, PyTorch, TensorFlow, Spark, LangChain, pandas, Matplotlib, NumPy, Dask, FastAPI

Tools & Platforms: Git, Docker, AWS, GCP, Redis, PostgreSQL, Tableau, Power BI, Excel
